ABSTRACT

HRTPO has annually prepared a report detailing average weekday traffic volumes for major roadways in Hampton Roads since 2006. Since 2012, this document has included an analysis of roadway speed data collected by INRIX, and an analysis of peak period roadway congestion levels based on these volumes and speeds.

This report is produced as part of the region's Congestion Management Process (CMP). The Congestion Management Process is an on-going process that identifies, develops, evaluates, and implements transportation strategies to enhance mobility regionwide.

NON-DISCRIMINATION

The HRTPO assures that no person shall, on the ground of race, color, national origin, handicap, sex, age, or income status as provided by Title VI of the Civil Rights Act of 1964 and subsequent authorities, be excluded from participation in, be denied the benefits of, or be otherwise subject to discrimination under any program or activity. The HRTPO Title VI Plan provides this assurance, information about HRTPO responsibilities, and a Discrimination Complaint Form.

ACKNOWLEDGMENTS & DISCLAIMERS

Prepared in cooperation with the U.S. Department of Transportation (USDOT), Federal Highway Administration (FHWA), and Virginia Department of Transportation (VDOT). The contents of this report reflect the views of the Hampton Roads Transportation Planning Organization (HRTPO). The HRTPO is responsible for the facts and the accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of the FHWA, VDOT or Hampton Roads Planning District Commission. This report does not constitute a standard, specification, or regulation. FHWA or VDOT acceptance of this report as evidence of fulfillment of the objectives of this planning study does not constitute endorsement/approval of the need for any recommended improvements nor does it constitute approval of their location and design or a commitment to fund any such improvements. Additional project level environmental impact assessments and/or studies of alternatives may be necessary.

PUBLIC REVIEW AND COMMENT 42

INTRODUCTION

The Hampton Roads Transportation Planning Organization (HRTPO) has annually prepared a report detailing average weekday traffic volumes for major roadways in Hampton Roads since 2006. Since 2012, this document – now referred to as the *HRTPO Annual Roadway Performance Report* – has included an analysis of roadway speed data collected by INRIX, and an analysis of peak period roadway congestion levels based on these volumes and speeds.

The traffic volume data included in this document is collected from a variety of sources, including the Virginia Department of Transportation (VDOT), the regional bridge and tunnel facilities, and tolled facilities. Data is also included from those localities in Hampton Roads that maintain their own traffic count programs, including Newport News, Suffolk, and Virginia Beach.

In addition to traffic volume data, this report includes HRTPO's analysis of speed data collected by INRIX. INRIX collects this data using millions of probe vehicles, including taxis, delivery vans, fleet vehicles, trucks, and smartphone users. The speed data included in this report represents directional weekday peak period data averaged over the entire year of 2023 by 15-minute time interval.

This report is produced as part of the region's Congestion Management Process (CMP). The Congestion Management Process is an on-going process that identifies, develops, evaluates, and implements transportation strategies to enhance mobility regionwide. The CMP assists in developing regional objectives for congestion management, developing multimodal performance measures, collecting data and monitoring system performance, analyzing congestion problems, assessing and implementing strategies, and evaluating strategy effectiveness.

This document includes those roadways that comprise the Hampton Roads CMP roadway network (as shown on pages 2-5), which includes all roadways classified by VDOT as minor arterials, principal arterials, expressways, freeways, or interstates, as well as selected collectors.

The data included in this document is used in various HRTPO planning efforts. These efforts include the Project Prioritization Process used in both the Regional Long-Range Transportation Plan and the Transportation Improvement Program, recurring regional studies such as the Regional Freight Study and the Military Transportation Needs Study, and special studies conducted by the HRTPO.

The *HRTPO Annual Roadway Performance Report* includes the following sections:

- **Roadway Congestion Level Maps** – Morning (AM) and afternoon (PM) peak period roadway congestion levels are shown for the Peninsula and Southside areas of Hampton Roads. These congestion levels are based on the speed data where it is available, or Highway Capacity Manual (HCM) Level of Service (LOS) methods for roadways without speed data.
- **Peak Period Congestion Levels** – This section includes charts showing the total amount of peak period congestion on major roadways throughout the region, by lane-miles and vehicle-miles of travel (VMT).
- **Regional Roadway Travel** – This section shows the changes in the amount of roadway travel throughout Hampton Roads on an annual basis. This is based on an analysis of data collected from approximately 80 continuous count station locations, where traffic volume data is collected continuously throughout the entire year.
- **Corridor Travel Times** – Detailed peak period travel time information is shown for ten notable corridors throughout the region. Travel times are shown for each corridor for the years 2014-2023.
- **Roadway Performance Data** – This section includes tables that show performance data for each roadway segment in the CMP Roadway Network. This includes weekday traffic counts for the years 2018-2023, and speeds, travel time indices, congestion levels, and congestion durations for the year 2023.

The roadway performance data included in this report, including all of the maps and tables, is also available in electronic format from the Hampton Roads Geospatial Exchange Online (HRGEO) website at <https://www.hrgeo.org>.

PEAK PERIOD CONGESTION LEVELS

As part of this roadway congestion analysis, HRTPO calculates the total amount of peak period congestion on major roadways throughout the region. This analysis is done using two measures:

- By lane-mile, which is a measure of the physical roadway system. As an example, a roadway segment that is six lanes wide and one mile long comprises six lane-miles.
- By vehicle-miles of travel (VMT), which is a measure of the total amount of travel. As an example, ten vehicles that each travel one mile produce ten vehicle-miles of travel.

These charts show the amount of peak period congestion on major roadways throughout the Hampton Roads Metropolitan Planning Area (MPA) in 2023.

Peak Period congestion levels, while increasing from levels during the pandemic, have not returned to pre-pandemic levels. In 2019, 6% of lane-miles and 11% of VMT were severely congested during the AM Peak Period. In 2020, these numbers had decreased to 2% and 3% respectively during the pandemic, and in 2023 the amount of AM Peak Period severe congestion in the region was 5% of lane-miles and 10% of VMT.

During the PM Peak Period, 14% of lane-miles and 20% of VMT were severely congested in 2019. In 2020 these numbers had decreased to 5% and 8% respectively during the pandemic, and in 2023 the amount of PM Peak Period severe congestion in the region was 9% of lane-miles and 14% of VMT.

Existing (2023) Regional Congestion Levels
Hampton Roads Metropolitan Planning Area (MPA)

REGIONAL ROADWAY TRAVEL

In Hampton Roads, there are approximately 80 locations equipped with continuous count stations, where traffic volume data is collected continuously throughout the entire year. These stations are primarily on major roadways such as freeways and principal arterials. Based on the data collected at these locations, regional traffic volumes increased 1.9% from 2022 to 2023. This followed a decrease of 13.8% from 2019 to 2020 and an increase of 10.4% from 2020 to 2021, due to the impacts of the COVID-19 pandemic.

Traffic volumes in Hampton Roads were 9.7% higher in 2023 than they were in 2000, but remained below the levels seen prior to the pandemic in 2019.

Source: HRTPO analysis of volume data collected by various sources at approximately 80 permanent count stations located throughout Hampton Roads.

CORRIDOR TRAVEL TIMES

As part of this roadway congestion analysis, HRTPO has prepared an analysis of peak period travel times for congested corridors throughout the region. The travel times shown on the following pages are for 2014-2023, and the free flow travel time (which is the travel time during uncongested conditions) is also listed.

The corridors analyzed by HRTPO for this study are:

- Hampton Roads Bridge-Tunnel
- Monitor-Merrimac Memorial Bridge-Tunnel
- Midtown Tunnel
- Downtown Tunnel
- I-64/High Rise Bridge
- I-64 Peninsula
- I-64/I-564 Norfolk
- I-264 Norfolk/Virginia Beach
- I-664 Southside
- Chesapeake Expressway

LEGEND – ROADWAY PERFORMANCE DATA TABLES

JURIS NAME

Includes the names of each jurisdiction as shown below:

CHES – Chesapeake
FR – Franklin
GLO – Gloucester County
HAM – Hampton
IW – Isle of Wight County
JCC – James City County
NN – Newport News
NOR – Norfolk
POQ – Poquoson
PORT – Portsmouth
SH – Southampton County
SUF – Suffolk
SUR – Surry County
VB – Virginia Beach
WMB – Williamsburg
YC – York County

COUNT DATE & SOURCE

This column shows the source for each traffic count, and the dates that the count was taken.

For those counts showing “1/1 – 12/31” as the count date, traffic volumes are collected continuously throughout the year and the weekday (Tuesday-Thursday) average is shown.

The following codes are used to represent each count source:

C – City/county
E – Estimate
O – Other
T – Tunnel or toll facility
V – VDOT

SPEED

Speed data is collected by INRIX on many roadways in Hampton Roads. The yearly average speeds are calculated by direction in 15-minute intervals in the AM Peak Period (5-9 am) and the PM Peak Period (3-7 pm). These speeds represent an average of weekdays (Tuesdays-Thursdays) throughout 2023.

This column shows the slowest 15-minute average speeds that occur in each direction during each peak period.

A “-” indicates that speed data is not available for that segment.

TRAVEL TIME INDEX (TTI)

The travel time index is a measure used to analyze congestion levels. The TTI represents the ratio of travel time in the peak period to travel time in free-flow conditions. A TTI of 1.20 means a 20-minute trip in free-flow conditions takes 24 minutes in the peak period.

The average TTI is calculated by direction for each 15-minute interval in the AM and PM Peak Period. This column shows the highest of these TTIs that occur in each direction. It occurs during the same 15-minute interval as the speed shown in the previous column.

A “-” indicates that speed data is not available for that segment, so the TTI cannot be calculated.

CONGESTION LEVEL AND DURATION

Congestion levels are shown in these columns for the AM and PM Peak Periods. Congestion levels are based on the travel time index when speed data is available, or Highway Capacity Manual (HCM) Level of Service (LOS) methods for roadways without speed data.

Congestion levels for roadways **with** speed data are shown based on the table below:

Congestion Level		Freeway	Arterial
Low	LOW	TTI < 1.15	TTI < 1.25
Moderate	MOD	1.15 ≤ TTI < 1.3	1.25 ≤ TTI < 1.4
Severe	SEV	TTI ≥ 1.3	TTI ≥ 1.4

Congestion levels for roadways **without** speed data are shown based on the table below:

Congestion Level		HCM LOS
Low	LOW	A-C
Moderate	MOD	D
Severe	SEV	E-F

Congestion duration represents the number of 15-minute periods during each 4-hour peak period where severe congestion is present.

PUBLIC REVIEW AND COMMENT

As part of the Hampton Roads Transportation Planning Organization's (HRTPO) efforts to provide opportunities for the public and stakeholders to review and comment on this draft report prior to the final product being published, a public review period was conducted from June 5, 2024, through June 21, 2024. The following public comment was received:

From: Sandra de los Rios
Sent: Friday, June 14, 2024 10:36 AM
To: Keith Nichols <knichols@hrtpo.org>
Subject: Roadway Performance Report Feedback

Good morning,

Reading the report sent out, I noticed a lack of awareness of traffic congestion in Virginia Beach.

For example, incomprehensibly, one of the few areas marked in red is the end of Nimmo Parkway intersecting with Mt. Pleasant Road. This is in a fairly rural area and the traffic is not significant other than during high school arrival and dismissal times. It doesn't seem like someone has actually monitored traffic to compile this report.

The aforementioned area is not at all "red" while other areas most definitely should be red: First Colonial Road, the intersection of First Colonial/Laskin Rd, Dam Neck/Holland Rd, Dam Neck/Princess Anne, Independence from Holland to the intersection with Virginia Beach Blvd, turning lane from Holland onto Rosemont Road, General Booth/Corporate Landing. I drive constantly for work as well as for non-profit business and can assure you that the traffic situation in Virginia Beach is significantly heavier and more problematic than portrayed. Just in the past year, driving times for me have increased drastically as overcrowding and overdevelopment have impacted roadways.

Thank you,

Sandra de los Rios

HRTPO RESPONSE:

Good afternoon,

Thank you for taking the time to review the draft HRTPO Annual Roadway Performance Report and providing us with your comments on roadway congestion in the Virginia Beach area.

Starting next month, we will be beginning an update to our Congestion Management Process (CMP) report. As part of the CMP report, we analyze the data on traffic congestion on the regional roadway network, determine the most congested corridors, and recommend a number of strategies to mitigate congestion at those areas. For this CMP update, we will do public outreach to gauge the thoughts of the public on congestion in Hampton Roads, including locations and causes of congestion. I will include your comments as part of the feedback for the upcoming study and would be happy to share the link when it becomes available if you would like to provide additional feedback to us.

Thanks,
Keith
